

Technical Bulletin

Document Number: 1212021

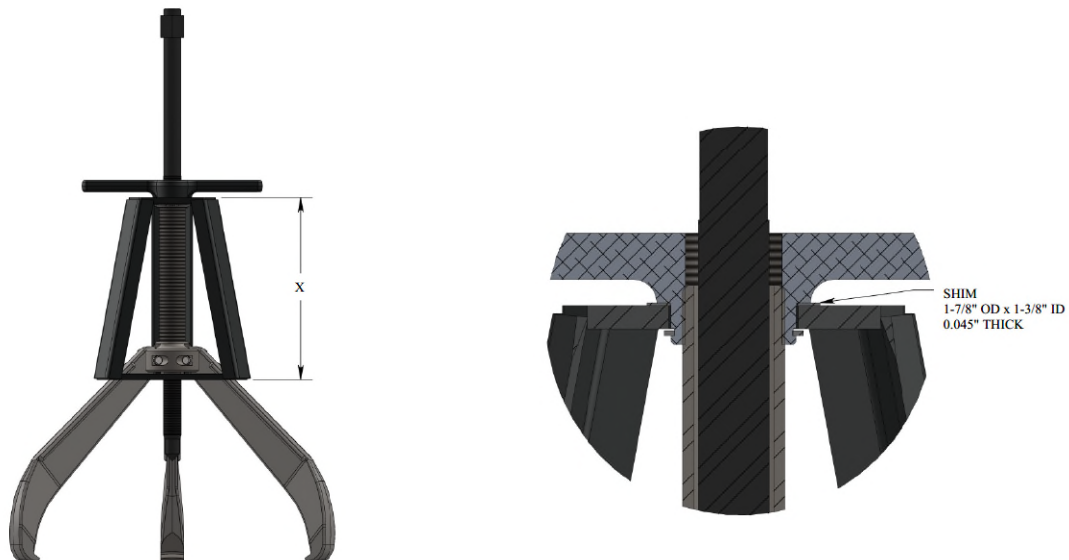

Issued: January 21, 2021

PART NUMBERS AFFECTED

Models: 110, PT110

OVERVIEW

Due to variation in casting dimensions, shims may be used on Posi Lock pullers to ensure puller performance. If service is required, and a cage needs to be replaced, please use the image and information below to determine if a replacement shim is required.

If the length of dimension X is 7.81" or greater, a shim is not needed.

If the length of dimension X is between 7.75" and 7.80", a shim is required. See image above for location and shim dimensions.
